Antibody binds recombinant human angiostatin and human plasminogen, specifically kringles 1-4, in solid-phase and solution-phase ELISA. Antibody binds only slightly to isolated plasminogen kringle fragment 1-3 and isolated fragment 4. It binds human plasminogen and recombinant angiostatin in immunoblotting techniques. Recommended use: 1-5 ug/mL. Researcher should titer antibody in specific assay. Store lyophilized antibody at -20C. Reconstitute with good laboratory water and centrifuge to remove insoluble material. Store reconstituted antibody in aliquots at -20C. Avoid repeated freeze-thaw cycles. Antibody expires 2 years after reconstitution.
