This antibody is specific for FIX as demonstrated by immunoelectrophoresis and ELISA. Suitable as a source of antibodies to human factor IX.

Neutralizing activity reported in Bethesda Units/mL IgG against normal plasma (Kasper CK et al, Thromb Diath Haemorrh 34:869, 1975). One Bethesda unit/mL is defined as the amount of inhibitor that resulted in 50% residual FVIII activity after 2 hours at 37°C.

Optimum conditions for use of this antibody in analytical procedures should be established in each laboratory. For research use only.
