Immunogen: Human alpha thrombin inactivated with PPACK.

Prior to conjugation, IgG is specific to human thrombin as demonstrated by immunoelectrophoresis and ELISA. This product is suitable for use as detecting antibody in ELISA's for thrombin and thrombin complexes, or for other applications that require an enzyme linked antibody.

Avoid exposure to sodium azide as this is an inhibitor of peroxidase activity.

Optimum conditions for use of this antibody in analytical procedures should be established in each laboratory.

For research use only.
