This antibody is specific for α 1AT as demonstrated by immunoelectrophoresis. A single precipitin arc is observed with normal plasma, of identical mobility to that obtained with purified α 1AT. This product is intended for use as detecting antibody in enzyme-linked immunoassay (ELISA) for the detection and measurement of α 1AT and its complexes.

Optimum conditions for use of this antibody in analytical procedures should be established in each laboratory. Avoid exposure to sodium azide as this is an inhibitor of peroxidase activity. For research use only.
