

## **Murine Anti-Factor X**

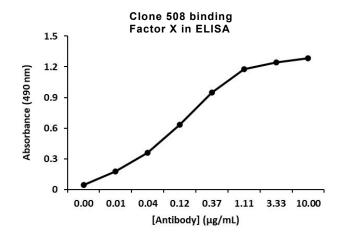

## Clone 508

Factor X (Mr 59,000) is a vitamin K-dependent plasma protein zymogen that plays a central role as the substrate for both the intrinsic (factor VIIa, tissue factor) and extrinsic (factor IXa, factor VIIIa) pathways. In the presence of cofactor factor Va, phospholipid, and Ca²+, activated factor X cleaves two peptide bonds in prothrombin to form thrombin. Mab HFX-HC binds human factor X heavy chain in solid-phase ELISA and Western blot.

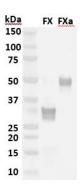

Description	
Antibody Source:	mouse monoclonal, IgG <sub>1</sub>
Antigen Species Bound:	human
Specificity:	factor X heavy chain
Immunogen:	human factor X

Formulation and Storage		
Purity:	Purified by protein G affinity chromatography from serum-free cell culture supernatant.	
Product Formulation:	Lyophilized from a $\geq 1$ mg/ml solution in 20 mM NaH <sub>2</sub> PO <sub>4</sub> 0.15 M NaCl, 1.0% (w/v) mannitol, pH 7.4. Concentration determined by absorbance measurement at 280 nm and using an extinction coefficient of 1.4 ( $\epsilon_{0.1\%}$ ).	
Reconstitution:	Reconstitute with deionized water.	
Storage:	Store lyophilized or reconstituted and aliquoted material at -20°C for prolonged periods. Avoid freeze-thaw cycles. Alternatively, add 0.02% (w/v) sodium azide to reconstituted solution and store at 4°C.	
Country of Origin:	USA	
Size Options:	0.1 mg or 0.5 mg	

g/ml. iter assay.
X and Xa.
X heavy I conditions nditions.

Western blot of reduced FX/FXa 1 ug/mL Clone 508
