

Murine Anti-Plasminogen

## Clone 016

Plasminogen, precursor of the active protease plasmin, is a single chain glycoprotein of 92 kDa. Found in plasma at a concentration of 200 ug/ml, it contains 5 disulfide-bonded structures termed "kringles" and a serine protease domain at the carboxy-terminus. Plasmin is primarily responsible for digesting fibrin clots. Mab PA K1-4 binds plasminogen and angiostatin by ELISA and western blot.

Description		
Antibody Source:	mouse monoclonal, IgG <sub>1</sub>	
Antigen Species Bound:	human	
Specificity:	kringles 1-4 segment of plasminogen	
Immunogen:	human plasminogen	

Immunogen:	human plasminogen	
Formulation and Storage		
Purity:	Purified by protein G affinity chromatography from serum-free cell culture supernatant.	
Product Formulation:	Lyophilized from a $\geq 1$ mg/ml solution in 20 mM NaH <sub>2</sub> PO <sub>4</sub> 0.15 M NaCl, 1.0% (w/v) mannitol, pH 7.4. Concentration determined by absorbance measurement at 280 nm and using an extinction coefficient of 1.4 ( $\varepsilon_{0.1\%}$ ).	
Reconstitution:	Reconstitute with deionized water.	
Storage:	Store lyophilized or reconstituted and aliquoted material at -20°C for prolonged periods. Avoid freeze-thaw cycles. Alternatively, add 0.02% (w/v) sodium azide to reconstituted solution and store at 4°C.	
Country of Origin:	USA	
Size Options:	0.1 mg or 0.5 mg	

Applications	
Working Concentration:	Approximately 1-5 μg/ml. Researcher should titer antibody in specific assay.
ELISA:	Binds plasminogen and angiostatin, specifically kringles1-4.
Immunoblotting:	Binds plasminogen and angiostatin under reduced and non-reduced conditions.
